You need at least one thorough book on linear regression, and Fox is arguably the gold standard, as he's the author of the R "car" package, derived from his Companion to Applied Regression book, which contains the canonical Type II and III Anova implementation, the variable inflation factor function, and other useful tools.

Arguments y, response variable for the default method, or a lm or formula object. If y is a linear-model object or a formula, the variables on the right-hand-side of the model must all be factors and must be completely crossed, group, factor defining groups, center. The name of a function to compute the center of each group; mean gives the original Levene's test; the default, median, provides ...
